About Us

PT. MAHAKAM CELEBES ENERGI

PT. Mahakam Celebes Energi is a renewable energy company specializing in the production and supply of high-quality biomass, particularly charcoal and briquette products. Leveraging the abundant agricultural and forestry resources in Indonesia, we transform coconut shells, wood residues, and other biomass materials into clean, efficient, and sustainable energy solutions for domestic industries and international markets.

Formerly known as CV. Celebes Energi Lestari (CELLS), our company has evolved into a stronger and more innovative entity with a clear commitment to sustainability, reliability, and continuous improvement. Through modern processing technology and a dedicated team, we ensure consistent product quality while supporting the transition towards greener energy alternatives for various sectors.

Vision

To become the largest provider of sustainable biomass by 2035.

Mission

- Deliver renewable energy solutions based on biomass that are efficient, high-quality, and environmentally friendly.
- Develop strategic partnerships with farmers, local communities, and industry players to strengthen the biomass supply chain.
- Drive continuous innovation in biomass energy production and distribution technologies.
- Build a business system that is transparent, honest, and responsible, aligned with the values of BERKAH.
- Make a real contribution to national energy security and carbon emission reduction through the utilization of agricultural and forestry waste.

Our Core Values

BERKAH

- B – Bersih (Menjaga lingkungan tetap lestari dan bebas emisi)
 - *Clean (Maintaining an environment that is sustainable and low-emission)*
- E – Efisien (Mengoptimalkan sumber daya untuk hasil maksimal)
 - *Efficient (Optimizing resources for maximum results)*
- R – Responsif (Tanggap terhadap kebutuhan mitra)
 - *Responsive (Being attentive and adaptive to partners' needs)*
- K – Kolaboratif (Membangun sinergi dengan berbagai pemangku kepentingan)
 - *Collaborative (Building synergy with various stakeholders)*
- A – Akuntabel (Bertanggung jawab dalam setiap langkah usaha)
 - *Accountable (Taking responsibility in every business step)*
- H – Harmonis (Selaras dengan alam, masyarakat, dan keberlanjutan)
 - *Harmonious (Aligned with nature, communities, and sustainability)*

Our Products

Charcoal Briquettes

"Steady heat, cleaner energy"

Our charcoal briquettes are produced from high-quality agricultural and forestry residues, ensuring consistent heat, long burning time, and low ash content. Designed for both household and industrial use, they provide an efficient and environmentally friendly alternative to conventional fuels.

Charcoal

"Pure fuel for powerful performance"

Kami membantu Anda mengurangi emisi karbon melalui We supply premium-grade charcoal made from selected biomass materials, processed through controlled carbonization to achieve optimal purity and performance. Our charcoal is highly suitable for cooking, grilling, metallurgy, and various industrial applications.

Rice Husk

"Lightweight, sustainable, and energy-smart."

Rice husk is one of our key biomass products, offering a clean and renewable energy source widely used for boilers, gasification systems, and agricultural applications. Its high silica content and stable calorific value make it an economical and sustainable fuel option.

PREMIUM CHARCOAL BRIQUETTES

COCODAY

100% natural charcoal

HERBAL CHARCOAL
100% NATURAL COCO VIBES

Pellets

"Compact energy, maximum efficiency"

Our biomass pellets are manufactured using compressed agricultural waste to produce a dense, energy-rich, and easy-to-handle fuel. Ideal for industrial boilers, heating systems, and renewable energy facilities, they offer consistent quality and efficient combustion.

Palm Kernel Shell

"High-calorific power for industrial needs"

KPalm Kernel Shell is one of the most in-demand solid biofuels in the energy sector. Our PKS products are screened and processed to ensure high calorific value, low moisture, and minimal impurities—making them a reliable fuel for power plants and industrial operations.

Other Biomass

"Diverse natural sources for limitless energy potential"

We also provide various alternative biomass materials to support diverse energy and industrial needs:

- **Cocoa Pod Husk:** A valuable biomass resource derived from cocoa processing, offering good calorific value and suitable for combustion or pelletizing.
- **Candlenut Shell:** A dense and energy-rich material ideal for charcoal and thermal energy production.
- **Corncob (Tongkol Jagung):** A versatile biomass fuel known for its stable burn rate and high availability, commonly used in boilers, dryers, and rural energy applications.
